TAKE A SHOT AT CANCER!
Protect your child from HPV-related cancers by vaccinating.

Human Papillomavirus (HPV) is easily spread and most people don't know they have it. HPV causes several types of cancer.

90% of cervical cancers are caused by HPV

70% of mouth & throat cancers may be linked to HPV

The HPV vaccine protects your child's future. The vaccine...

Prevents 6 types of cancer

Data continues to show it is Safe, Long-Lasting, Effective

Is recommended with other routine adolescent vaccinations

Meningitis, HPV Cancers, Tdap

HPV can be prevented in both girls and boys through vaccination. Both should complete the vaccine series by age 13.

Ages 9-10: Good
Ages 11-12: Perfect Timing!
Ages 13-14: Still Time
Ages 15-26: Overdue

75.6% of VA teens have started the HPV series

Most Virginians are taking the step to protect their families
